

Calculating percent proficiency and its percent change in New York State education assessment data

After downloading the [2015, 2016 and 2017 data from the New York State Education Department \(https://data.nysed.gov/downloads.php\)](https://data.nysed.gov/downloads.php) and renaming the files to 3-8_ELA_MATH_{{ year }}.csv, this program calculates the percent proficient, scoring at Level 3 or 4, of each school. The percent proficient is calculated by adding each raw proficient count together for available grades and then dividing the total test takers. The 2013 and 2014 files were first converted from .mdb file format.

```
In [1]: import agate
import csv
```

Due to missing school values and changes in data columns, I needed two different typetesters to force the columns into their correct formatting.

```

In [13]: tester_15 = agate.TypeTester(limit=100,force={
